Office Action Summary

Art Unit: 1741

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-8, drawn to an anode, classified in class 204, subclass 280.
- II. Claims 9-17, drawn to a method of supplying electricity to an anode, classified in class 205, subclass 96.

The inventions are distinct, each from the other because:

Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the anode of the Group I claims can be used in processes other than the process of the Group II claims. For example, a constant amount of electricity can be supplied to the anode segments simultaneously.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
